Executive Summary

This report complements the deployment of the project website at http://chainreact.org

Table of Contents

1 Important information about project website

D8.2 calls for the deployment of a project website, which is now up and running at http://chainreact.org

This website will be the central place for news and activities carried out by the project, and over time will come to represent the central dissemination point for ChainReact.

It was decided by the consortium that Decko's platform would be used to create the website, as it is customizable, accessible and allows for editing privileges by consortium members who may want to add events, publications and other information which the consortium would like to draw attention to.

Visitors to the website can find out information about the consortium and as the project progresses can see specific deliverables, research and practical outcomes.

The website will host all deliverables once submitted to the EC and accepted. Additionally all pertinent public information is made available here, as well as links to other relevant sites and links to partners' websites.

The website will be managed by Ethan McCutchen (Decko) and Vishal Kapadia (WikiRate) and will be central to the project's dissemination activities; where the

portal will be mentioned at conferences and wherever the consortium are looking to disseminate their work.

The website is seeded with essential content for now; but as the project develops is open for improvement and refinement according to needs called for by the emerging dissemination strategy.

The two below images refer to the homepage (Figure 1) and an informational page about the partners and what they bring to the project (Figure 2).

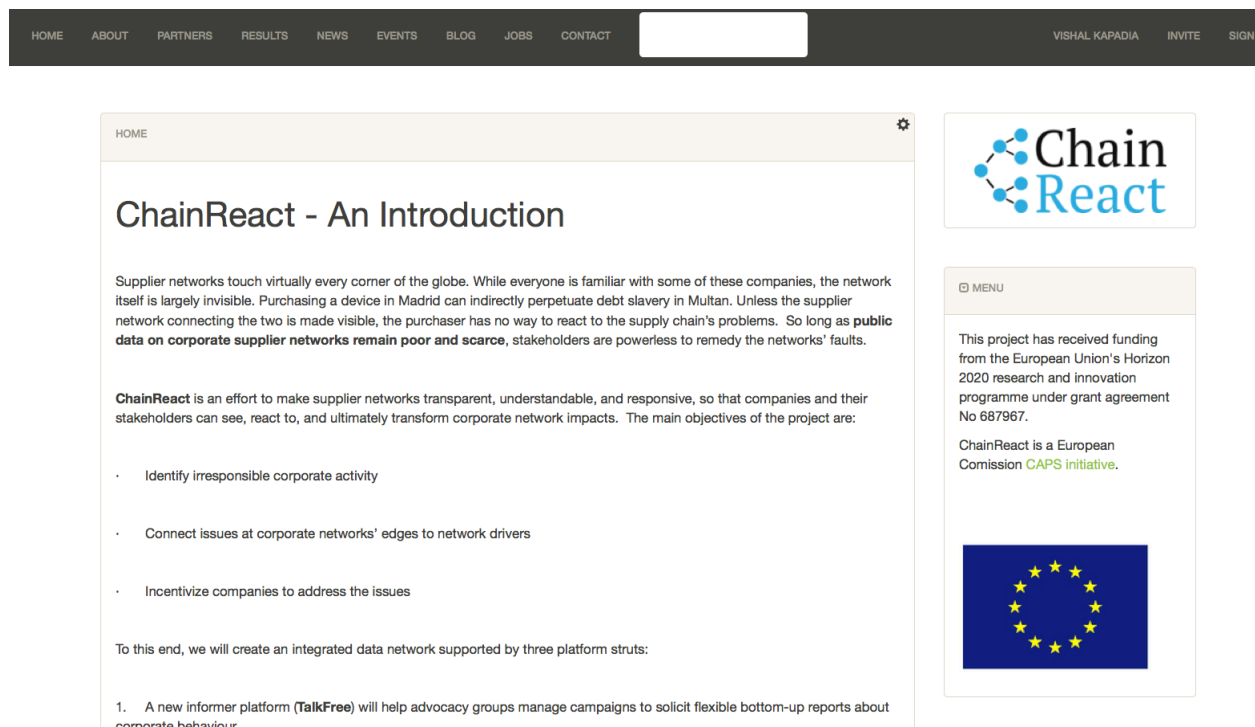

Figure 1: Screenshot of Website homepage including consortium logo and introduction to ChainReact's mission/ approach

Figure 2: introduction to project partners and the expertise, which they bring to different struts of the project
